

Hadoop WordCount – Command Sequence (Local Standalone Setup)

1. Create directory for compiled classes

```
mkdir wordcount_classes
```

2. Compile Java program

```
javac -classpath `hadoop classpath` -d wordcount_classes WordCount.java
```

3. Create JAR file

```
jar -cvf wordcount.jar -C wordcount_classes/ .
```

4. Start Hadoop services

```
start-dfs.sh  
start-yarn.sh
```

5. Verify services

```
jps
```

6. Create input file

```
echo "hello world hello hadoop" > input.txt
```

7. Create HDFS input directory

```
hadoop fs -mkdir /input
```

8. Upload file to HDFS

```
hadoop fs -put input.txt /input
```

9. Remove old output directory (if exists)

```
hadoop fs -rm -r /output
```

10. Run MapReduce job

```
hadoop jar wordcount.jar WordCount /input /output
```

11. View output

```
hadoop fs -cat /output/part-r-00000
```

Sample Output

```
hadoop 1  
hello 2  
world 1
```
